Summary

Hi, I'm Volodymyr from Lviv, currently developing in the direction of Frontend. In my portfolio you can find several pat projects, that I wrote while studying at different courses. Unfortunately there is no real commercial experience yet, but I have practice of working in small team, with Kanban and Git, in a sense, simulators of a real project. My strong sides: sociability, stress resistance, propensity to learn, ability to listen and hear, self-confidence, responsibility, honesty. My main professional skills: **HTML, CSS, JavaScript, React, Redux Toolkit, Angular, GitHub, Bootstrap**. I am considering vacancies for the position of **Frontend developer**.

Skills

- | | | | | |
|---------|-----------------|-----------------|--------------|-------------|
| • React | • Redux toolkit | • Angular | • JavaScript | • Node.js |
| • CSS | • HTML | • react-i18next | • GitHub | • Bootstrap |
| • MUI | • npm | • SQL | • MongoDB | • Figma |

Experience

- **movieDb**
This project is based on TMDB to search for movies from around the world. The project is written on React, Redux Toolkit using React Hook, async functions, and functional components. In this project, I implemented, routing, pagination, searching a movie by title, switcher of the dark theme, and different sorting methods. **Movie_db**
- **CRUD-FULL-STACK**
This is a Full-stack mini pet-project. Frontend: React, Redux toolkit, axios, react-hook-form. Backend: Node.js, express, Typescript and mySQL database and typeorm. In this project I implemented the main methods such us Reed, Create, Update, Delete. And showed how the frontend interacts with the backend and the database. **CRUD-react-node**
- **shop-react**
This is a small e-commerce project.The project is written on React, Redux Toolkit using React Hook, async functions, and functional components. In this project, I implemented, routing, pagination, searching a products by name or prise or only word. I implemented filtering by checkboxes and implemented filtering by price using a doubleslider , as well as filtering by rating. I implemented the full cycle of the cart logic (add, remove, increase, decrease). **Shop React**
- **searchMoviesAngular**
This project is based on TMDB to search for movies and TV show and actors from around the world. The project is written on Angular. **SearchMoviesAngular**
- **Shop**
This is a small e-commerce project.The project is written on Angular. The backend is written using Firebase. A user panel and an administrator panel are implemented here. Login is implemented **Shop**
- **Weather-react**
This is a small weather project.The project is written on React Redux Toolkit. this project base on Weather API **Weather-react**

Education

2022-2022 - **eleks-bootcamp**: JavaScript, HTML, CSS, React

2021-2022 - **Octen Web University**: JavaScript Complex

2000-2006 - **НУ"Львівська Політехніка"**: Computerized automation and control systems
