ABOUT ME

I am a Frontend Developer with 1 year of commercial experience in building responsive and user-friendly web applications. I specialize in React, Next, Fngular and have a solid understanding of modern frontend technologies, including JavaScript, TypeScript, and CSS frameworks. I am passionate about creating clean, maintainable code and delivering seamless user experiences.

WORK EXPERIENCE

TMDB

movieDb
- Developed a dynamic movie search platform utilizing TMDB API for global movie discovery.
- Engineered with React and Redux Toolkit, leveraging React Hooks and asynchronous functions for enhanced performance.
- Implemented key features including routing, pagination, and advanced search capabilities by title.
- Integrated a dark theme switcher and various sorting methods to improve user experience.

CLIENT

Numbers
- Developed an interactive game using React and React Hooks to seamlessly arrange numbers through click-based interactions.

CLIENT

shop-react
- Developed a dynamic e-commerce application utilizing React and Redux Toolkit, leveraging React Hooks and asynchronous functions for optimal performance.
- Implemented user-friendly routing and pagination for efficient product navigation.
- Enhanced the search functionality, allowing products to be filtered by name, price, and keywords.
- Integrated advanced filtering options, including checkbox selections, a double slider for price, and rating filters.
- Executed complete cart logic functionality, including operations to add, remove, increase, and decrease product quantities.

TMDB

searchMoviesAngular
- Developed a dynamic web application leveraging Angular, utilizing TMDB API for seamless searching of movies, TV shows, and actors globally.

Weather-react
- This is a small weather project.
- The project is written on React Redux Toolkit. this project base on Weather API
